

Sunday

1

In 1985, scientists discovered a hole in the ozone layer.

8

Sheila Watt-Cloutier is an Inuit climate change activist. She helped develop the Stockholm Convention, which bans toxic chemicals.

15

Canada Geese can travel over 1 000 km in one day when they migrate!

22

When you eat fast food think about how much packaging there is. All that packaging means a lot of waste.

29

Great Blue Herons build nests in trees that are one metre wide!

Monday

2

Vermicomposting is the process of using worms to transform organic waste into natural fertilizer.

9

Help the environment by growing your own fruits and vegetables. You'll get delicious food and your plants will absorb CO₂.

16

Get your family involved in making changes to your lifestyles that are good for the environment!

23

Victoria Day

30

Buy local produce and learn how to can, pickle, freeze or dry it so that you can have them all winter.

Tuesday

3

World Asthma Day

Asthma can be caused by air pollution.

10

17

Riddle: What kind of bee can't be understood?

Answer: A mumble bee!

24

Many salmon are **anadromous**, which means they can live in saltwater and freshwater!

31

Cool fact!

About 70% of the Earth's surface is covered by the oceans.

Wednesday

4

“Look deep into Nature, and then you will understand everything better.”

Albert Einstein

11

Biodiversity is the variety of life on Earth. “Bio” means life and “diversity” means difference.

18

Wetlands can help reduce the risk and severity of floods by storing excess water and slowing the flow.

25

Before you put out a bird feeder make sure that you do research on the right food for the birds in your area.

Thursday

5

12

The North American prairies are one of the best agricultural regions on Earth.

19

Guess who?

26

Rachel Carson Day

Silent Spring, a book written by Rachel Carson in 1962, helped to kick-start the environmental movement.

Friday

6

Each hour the sun provides enough energy to meet the world's needs for an entire year!

13

Putting some plants in your room will help clean the air.

20

Cool fact!

A water molecule will spend about 10 days in the air once it has evaporated.

27

Saturday

7

Energy saved from one recycled aluminum can will operate a TV set for three hours.

14

Gases that contribute to climate change can be produced by the landfills where our garbage is sent.

21

Cultural diversity is influenced by local environments; by protecting cultural traditions we protect natural biodiversity.

28

Dry your clothes on a clothesline. It's free, doesn't use any energy and is better for your clothes.

May 2011
